

avontus_api_query

HI,

I am writing this program to pull invoice data from your application. I was able to download the code from <https://quantifyapi.avontus.com/t/sample-code-to-synchronize-invoices-with-accounting-software/41>

We require the below fields from your invoice object. Can you help us with a field mapping? I tried posted on the question. The question is not there now and when I am trying to post again, the page is hung. Could you please help us in this?

```
{
  "Invoice":[
  {
    "DocumentID":"","
    "CompanyCode":"","
    "PostingDate":"","
    "DocumentDate":"","
    "FiscalYear":"","
    "DocumentType":"","
    "DocumentCurrency":"","
    "ReferenceDocumentNumber":"","
    "HeaderText":"","
    "PostingKey":"","
    "VendorNumber":"","
    "SpecialIndicator":"","
    "ExchangeRate":"","
    "DocumentCurrencyAmount":"","
    "LocalCurrencyAmount":"","
    "TaxCode":"","
    "TaxAmount":"","
    "ConsolidationTransactType":"","
    "AssignmentNumber":"","
    "ItemText":"","
    "CostCenter":"","
    "ProfitCenter":"","
    "PartnerCompanyID":"","
    "PartnerBusinessPlace":"","
    "PartnerBranchCode":"","
    "ValueDate":"","
    "WHTFlag":"","
    "WBS":"","
    "ReferenceKey1":"","
    "ReferenceKey2":"","
    "ReferenceKey3":""
  }
  ]
}
```
